Magnetic Resonance Image Analyst

St George’s, University of London, London, UK

Molecular & Clinical Sciences Research Institute

Salary: £32,004 to £37,075 plus London Allowance of £2,976
Closing Date: Monday 21 August 2017
Interview Date: Friday 25 August 2017
Reference: 462-17

(Fixed term, 18 months)

The post-holder will work closely with research and clinical teams to develop and validate imaging processing methods for multimodal MRI to create whole brain 3D tissue-type maps of brain tumours. Pattern recognition methods will be applied to diffusion tensor imaging and magnetic resonance spectroscopy data acquired using a 3T scanner.

The post-holder will have practical experience of developing image analysis methods in a biomedical research environment. A strong scientific background is required and an understanding of MRI physics and technology is desirable. The ability to communicate and work well with the varied staff in a clinical research environment is essential.

The salary for the role will be within the SGUL Grade 6 range: £32,004 - £38,183 plus £2,976 London Allowance.
