Postdoctoral research associate in high-resolution fMRI

University of Glasgow, Institute of Neuroscience and Psychology

We are looking to recruit a Post Doc to join a 3-year MRC funded project titled: ‘Laminar fMRI and resting state fMRI in the somatosensory system – effect of peripheral nerve injury on cortical circuits’, working with Jozien Goense (PI, MR-physics, neuroscience), John Riddell (neurophysiology), Andrew Hart (reconstructive surgeon) and collaborating with the Bandettini lab at the NIH. The project involves the development and optimization of cortical layer dependent fMRI at 7T, and its application to the study of cortical reorganization after peripheral nerve injury and recovery. The project provides the opportunity for highly interdisciplinary work combining MR-physics with the direct medical application of layer-dependent fMRI. The work involves sequence- and data analysis method development and optimization, fMRI scanning in healthy volunteers and patients, and supporting sensorimotor testing in healthy volunteers and patients.

Applicants should have a PhD Degree (or expect soon to obtain) or equivalent in (Biomedical) Engineering, Physics, Neuroscience or related field. Ideally, applicants will have experience in fMRI, sequence design/optimization and fMRI data analysis. Any applicant will have enthusiasm, and a capacity for acquiring expertise in the techniques and skills necessary for successful completion of the project.

This post is full-time and funding is available for three years, with a projected start date early in 2018. It will be based at the newly built Imaging Center of Excellence at the Queen Elizabeth University Hospital, housing a Siemens Magnetom Terra 7T scanner.

Glasgow is a friendly and vibrant city with a lively music and art scene, excellent restaurants and is regularly highlighted as a top travel destination (Lonely Planet, Rough Guides, National Geographic Traveller, CNN, Guardian), with Loch Lomond less than an hour away and the highlands within a few hours reach.

Please apply online at www.glasgow.ac.uk/jobs (ref. 019668) before Jan 14, 2018. Enquires may be made to Dr. Jozien Goense (Jozien.Goense@glasgow.ac.uk).

It is the University of Glasgow’s mission to foster an inclusive climate, which ensures equality in our working, learning, research, and teaching environment. We strongly endorse the principles of Athena SWAN, including a supportive and flexible working environment, with commitment from all levels of the organization in promoting gender equity.
