Postdoctoral Fellowship in Brain Imaging Analysis at Cleveland Clinic

We are looking for a PhD level post-doctoral fellow researcher in brain imaging analysis. The researcher will work with the Principal Investigator in conducting NIH funded research in neurobiological basis of neuropsychiatric disorders, using brain imaging and bioinformatics techniques to combine behavioral data, imaging data and human genetic datasets. High degree of mathematical and programming expertise required. Use operating systems such as Linux, Unix and Matlab as well as Brain Imaging Analysis software. Be able to use statistical packages such as SPSS, SAS or R to conduct analysis. Coordinate data collection, organization and analysis and preparation of publications and grant applications. Ensure accurate and satisfactory implementation of research protocols and comply with requirements of all regulatory bodies. Please contact Amit Anand MD (ananda@ccf.org)
