

## MRI RF Coil Design Engineer

MR Solutions is a highly successful and innovative UK developer and manufacturer of pre-clinical MR imaging equipment for medical research. Products include cryogen-free MR imaging systems ranging from 3 Tesla to 9.4 Tesla which can also be accessorized with PET and SPECT imaging technologies. Recent growth and success has seen the company awarded two 'Queens Awards' for its innovation and export performance.

MR Solutions has an exciting new role within its organisation for an MRI RF Coil Engineer. The role will require the appointee to be experienced in the design and development of MRI RF Coils, including volume Coils, phased array Coils as well as Multi Nuclear Coils.

A successful candidate will be a graduate electronic/electrical engineer with previous experience in MRI. Previous pre-clinical MRI experience is an advantage but not essential.

Salary and location of work is negotiable.
