RECRUIT PEER REVIEWERS for Medical Writing & Publication

You Will Get

- **PAID** for providing high quality scientific peer reviews.
- Opportunity to stay abreast of the **newest research** and propel reviewers’ own research.
- **Recognition** and credentials for promotion and career development.
- Research **collaboration** opportunities.

We Are Looking For

- Faculty and Researchers in any of the fields related to **medical physics, imaging science, radiology, bioinformatics, and biostatistics** to serve as peer reviewers.
- A strong research background and publication record are required. Strong writing skills and experiences in editing scientific and medical papers are preferred.
- Scientific peer reviewer will assess the strength and weakness of the research paper, apply standardized guidelines, give definite and well-supported opinions, and provide detailed and constructive criticism, in order to improve the manuscript and increase its potential for publication.

As Peer Reviewer Nowadays

- Increasing burden and review fatigue
- Voluntary activity without monetary incentives
- Performing peer review occupies time and efforts spent on their own research
- Not directly benefit promotion and career development
- Valuable reviewers’ comments are not transferable across journals, leading to a low-efficiency peer review system

Our Solutions

- Provide peer review training and mentorship program for junior peer reviewers
- Pay for scientific peer reviews
- Researchers stay abreast of the newest research at the easiest time, and propel their own research
- Receive recognition and credibility for faculty promotion and career development
- Transparent and transferable peer review reports for multiple journals on our platform
- Improve research communication and foster collaboration

iCoreMed Technology and Service LLC was established in March 2015 in Chicago. It was founded by a Radiology faculty member of Northwestern Feinberg School of Medicine, with extensive experience in medical research and publications. The company provides scientific peer review, medical writing, and data analysis services to help researchers translate their research into publications.

MISSION: To create a platform with centralized resources to serve all stakeholders in scientific community and build a more efficient publication ecosystem.
