Postdoctoral Fellowship at Stanford University

A Postdoctoral Fellowship position is available in the Daldrup-Link lab (http://daldrup-link-lab.stanford.edu/) in the Molecular Imaging Program at Stanford (MIPS) for a scientist with expertise in preclinical MR imaging and cancer imaging. The successful candidate will join a team of researchers who investigate new immunotherapies for the treatment of osteosarcoma and glioblastoma in mouse models with multi-modality imaging techniques.

The ideal candidate will have a PhD or MD/PhD in MR imaging, preclinical cancer imaging, molecular imaging or related field. Preference will be given to candidates who have experience with MRI of iron oxide nanoparticles and advanced diffusion-weighted MR imaging. While this position will have a focus on pre-clinical MRI, we have both pre-clinical and clinical MRI research ongoing in our lab and our team members have the option to participate in both. Successful applicants will have a track record of productive research and first author publications in the field of MR imaging, cancer immunotherapy and/or molecular imaging. The ability to work towards deadlines with general guidance is essential for success in the academic environment.

This position will remain open until filled and is renewable on an annual basis. Salary will be determined based on the experience of the candidate and the University guidelines for Postdoctoral Fellows. Stanford University is an Equal Opportunity/Affirmative Action Employer, and applications from women and underrepresented minority candidates are strongly encouraged. To apply, please submit your CV and brief statement of career goals to:

Heike E. Daldrup-Link, M.D., Ph.D.
Professor of Radiology
Department of Radiology
