Postdoctoral Position in Metabolic Imaging Research

A postdoctoral training position is available in the laboratory of Jae Mo Park, in the Advanced Imaging Research Center (AIRC) at UT Southwestern Medical Center to study \textit{in vivo} metabolism. Our laboratory has several exciting projects related to 1) quantitative assessment of \textit{in vivo} metabolism, 2) development of metabolic imaging in animals, and 3) its translation to humans.

Candidates must hold a Ph.D. and/or M.D. degree. Experience in MRI, image processing, or metabolism research leading to publication in peer-reviewed journals is recommended. Candidate is expected to (1) develop MR spectroscopic imaging for the preclinical/clinical studies, (2) perform \textit{in vivo} experiments and \textit{ex vivo} metabolomics analysis, or (3) optimize pulse sequences and reconstruction algorithms for clinical translation. Pulse sequence programming (GE, Philips, or Bruker systems) and strong computer skills (Linux/Unix/MATLAB/C) are desirable.

Information on our postdoctoral training program and benefits can be found in our Postdoc Handbook or at \url{http://www.utsouthwestern.edu/postdocs}.

Interested individuals should send a CV, statement of interests, and a list of three references to:
