The BioMedical Engineering and Imaging Institute (BMEII) at The Icahn School of Medicine at Mount Sinai is seeking a motivated Postdoctoral Fellow to develop and apply novel MRI techniques in neuroimaging in conjunction with PET data with applications to Alzheimer’s disease. This is an excellent opportunity to conduct innovative imaging research as a member of a team of technical and clinical experts with access to state-of-the-art imaging equipment housed at the Hess Center for Science and Medicine in New York City. (https://bmeiisinai.org/anrp/). The position will be based in the Neuroimaging group mentored by Dr. Priti Balchandani, Director of the Advanced Neuroimaging Research Program, with an affiliation with the Program in Neuroimaging and Biomarker Research in Aging and Alzheimer’s Disease, mentored by Dr. Trey Hedden (https://labs.icahn.mssm.edu/heddenlab/).

Position responsibilities include independent research, contributions to publications and grants, and leadership roles within the Institute. Opportunities for teaching also exist. The candidate will primarily work on development and implementation of MRI acquisition and analysis methods at 7T and 3T, and on translational research integrating PET and MRI data. The work will consist of MR pulse sequence implementation, image acquisition on patients and healthy volunteers and post-processing of imaging data. The postdoctoral fellow is also encouraged to develop their own research projects within the mission areas of the BMEII. The candidate should have a PhD in one of the following: Engineering, Physics, Chemistry, Mathematics, Computer Science, Neuroscience or a related field. Demonstrated research experience and publication records are necessary. Experience with Siemens IDEA and ICE environments are preferred.

Salary will be commensurate with experience and the cost of living in New York. Subsidized housing close to the Mount Sinai campus is available.

The BMEII at Mount Sinai is a state-of-the-art research facility with a mission centered on development, validation, translation and education of innovative technology in biomedical imaging to address both basic and clinical research problems. The center currently houses multiple research dedicated instrumentation, including 3T and 7T human MRI scanners, 3T PET/MR, PET/CT, 9.4T and 7T small animal MRI scanners. Along with the material resources, the BMEII has over 65 members with expertise in a variety of translational research, from neuroimaging to nanomedicine. Icahn School of Medicine at Mount Sinai attracts outstanding scientists, clinicians and students, all of whom share a deep commitment to expanding biomedical knowledge, providing expert clinical care and serving the community. Working in close partnership with The Mount Sinai Hospital, the Icahn School of Medicine serves one of the most diverse and complex patient populations in the world.

The postdoctoral position at BMEII is a full-time research position. Interested individuals should send a CV, a brief statement of interests, and a list of referees to Dr. Priti Balchandani (priti.balchandani@mssm.edu). The position is immediately available until filled.
