Postdoctoral research fellow/associate in quantitative body MRI

The MRI Physics group at Memorial Sloan Kettering Cancer Center (MSK) is offering a postdoctoral research fellow position in body quantitative MRI. The successful candidate will work under the supervision of Drs. Ouri Cohen and Ricardo Otazo.

The main goal of the position is to develop motion-insensitive MR fingerprinting methods for imaging of body tumors. This includes a combination of pulse sequence programming and coding of new image reconstruction algorithms (multidimensional, deep learning) as well as application of developed technology to clinical cancer cases, in collaboration with body radiologists. More information can be obtained at http://cohen-lab.org.

The selected candidate will have the opportunity to work in a multidisciplinary group including physicists, engineers, computer scientists and clinicians in the departments of Medical Physics and Radiology at one of the world leader institutions in clinical cancer care and research.

Salary will be commensurate with experience and the cost of living in New York City. Subsidized housing close to the MSK campus is available.

Facilities: The MRI Physics group has substantial research time at clinical MRI scanners in the Department of Radiology, including state-of-the art 1.5T and 3T GE scanners and a 3T PET-MR GE scanner. The MRI Physics group also has 3 high performance computer servers with multiple GPUs for image reconstruction and analysis tasks.

Requirements: Candidates should have a PhD in Physics, Engineering or Computer Science. Background in MRI physics, pulse sequence programming in GE EPIC, and deep learning is a plus. Strong programming skills (Python, C/C++, Matlab etc.) and excellent verbal and written communication skills are required.

To apply: Please submit a CV and brief research statement to:

Ouri Cohen, PhD
