Magnetic Resonance Imaging
Tips for Scanning Patients with Implants

**BEFORE**
- Follow your site’s process for screening the patient
- Identify the manufacturer and model of any implanted devices
- Locate the MRI safety information in the device manufacturer’s labeling

Look for one of these icons:
- **MR Safe.** Patients with MR Safe devices have no scanning restrictions.
- **MR Conditional.** For patients with MR Conditional devices, implant conditions should be matched with the MR system information.
  - Consult your MR system manual for MR system information
  - Ensure that the MR system meets all conditions provided in the MR Conditional labeling
  - If conditions are not met, the patient should not be scanned
- **MR Unsafe.** Patients with MR Unsafe devices should not be scanned. Assume any unidentified implant is MR Unsafe.

- Document device information in the medical record
- Consult a physician for any risk/benefit decisions

For MR Conditional devices:
- Follow all pre-scan conditions, such as special programming modes

**DURING**
- For MR Conditional devices, follow all scan conditions such as specific absorption rate (SAR) restrictions or patient positioning instructions
- Monitor the patient at all times

**AFTER**
- Assess the patient for discomfort or injuries
- Follow any post-scan conditions, such as device checks or programming
