ISMRM Workshop on MRI of the Placenta
Abstract Submission Deadline: 17 November 2017

04–06 February 2018
Westin Peachtree Plaza
Atlanta, GA USA

Development of enhanced MRI methods, augmented through the NIH-supported Human Placenta Project, is rapidly expanding our ability to evaluate placental health. We invite researchers and clinicians interested in this actively growing field to attend this workshop for in-depth presentations and discussions of MRI technologies, current and future, which can provide a better understanding of placental biology and its implications for clinical practice.

Target Audience
Researchers and clinicians interested in: placental development, structure, and function; the development of in vivo MR imaging methods for improved assessment of placental health; and the role of non-invasive imaging in understanding placental biology and affecting clinical practice.
